

A Simple Class:

Our first program contains a class and two objects of that class. Although it's simple, the program demonstrates the syntax and general features of classes in C++. Here's the listing for the SMALLJOB program:

```
#include <iostream>
using namespace std;
class smalljob
{
private:
    int somedata;
public:
    void setdata(int d)
    { somedata =d;
    }
    void showdata()
    { cout <<"Data is "<< somedata<<endl;
    }
};

int main()
{
    smalljob s1, s2;    // define two objects of class smalljob
    s1.setdata(1066);   // call member functions to set data
    s2.setdata(1776);

    s1.showdata();     // call member function to display data
    s2.showdata();
    return 0;
}
```

- ✚ The class smalljob defined in this program contains one data item and two member functions.
- ✚ The two member functions provide the only access to the data item from outside the class. The first member function sets the data item to a value, and the second displays the value.
